World Renowned Inventor, Donald Spector, Develops Patent For Wireless Electric Acupuncture Patches

Patch Will Increase Muscle Performance in Addition to Alleviating Pain Formerly Resolved by Acupuncture Needles

PR Newswire

United Business Media

NEW YORK, June 29, 2012 /PRNewswire via COMTEX/ -- NEW YORK, June 29, 2012 /PRNewswire/ -- Lisa Pamintuan, President of New York College of Health Professions, announced that the College's Chairman, Donald Spector, a well-known serial entrepreneur inventor, has filed a groundbreaking patent on wireless acupuncture patches under the Intellectual Properties

Policy of the College. The patches will cause electrical stimulation, either directly or by remote control, to specific acupuncture points and muscles. This stimulation will increase the muscle performance, as well as reducing lactic acid buildup and consequently reducing fatigue.

Spector stated, "While the patch provides benefits to athletes, it can also be used by patients suffering from pain and other ailments, for which acupuncture has been effective."

Dr. Mohammad Hashempour, MD, PhD, Dean of Academic Affairs and former Olympic Team doctor, believes the new wireless electric acupuncture patch technology can reduce muscle fatigue and subsequently enhance muscle performance.

"Patients often forget or do not use acupuncture in a consistent way," stated Hashempour. "While duplicating the advantages of leads that are temporarily connected to a patient, these patches can be left on for a prolonged period of time, including between visitations to an acupuncture specialist, during which time the chips can be programmed to stimulate at predetermined times or when needed."

There has yet to be a formal ruling on whether these patches, which may enhance sports performance, will be regulated by boxing commissions, team sports, individual sports or doping commissions. Based on current Olympic regulations, Hashempour feels it will not be banned.

"Even though these patches will provide a significant advantage in muscle strength and endurance, I do not believe they should be outlawed under doping regulations. There are no drugs involved, except by the release of the wearer's own natural chemicals and neurotransmitters. While acupuncture has been used in the Far East for thousands of years, this patent simply makes it possible for an athlete to use electrical stimulation - often cumbersome - as a self-contained patch that can be made as a disposable product," added Hashempour.

The wireless acupuncture patches are part of an extensive line that the College will license to third parties, providing a significant revenue stream to the College and helping it keep its tuition at less than half of other private institutionally accredited colleges of higher education. New York College had the first New York State Board of Regents approved acupuncture program and is the only private institutionally accredited college of higher education of its kind in the New York Metropolitan Area.

"The remote control aspect is extremely interesting in sports," stated Pamintuan. "The
